For home or business, save 26% with a solar tax credit.

What is a 10kW solar energy system?

A 10kW solar energy system can provide all the electricity the average home needs and probably more. In other words: The excess energy produced by your solar panels can be sent back to the grid, allowing you to make money from it. If you're connected to the power grid, a 10kW solar panel array can functionally offset all of your utility energy use.

Is a 10kW Solar System a waste?

If you're looking to go off the grid, a 10kW solar power system would likely be a waste unless you invest in a solar battery to capture the extra power produced during the day and make that power available when the sun's not shining. How much energy can a 10kW solar system produce?

How much roof space does a 10kW Solar System need?

You'd probably need between 500 and 625 square feet of roof space for a 10kW system, assuming you use a reasonable number of 300- or 400-watt solar panels. (An average-size solar panel takes up about 18 square feet of space. More powerful solar panels tend to be a little larger, though.

How do I choose a 10kW Solar System?

When selecting panels for a 10kW solar system, their output rating is crucial. Output ratings range from 200 to 400 watts, with higher-rated panels generating more power in less space. Optimal for this system are 500-watt solar modules, requiring a calculation to determine the total needed.

Can I install my own 10kW Solar System?

It is possible to install your own 10kW solar system if you have the necessary building and electrical permits in place. However, most municipalities and utilities require a licensed electrician to sign off on solar energy plans before your system can be built or connected to the grid.
