For a typical lithium-ion battery, the lithium content is approximately 1% to 3% of the total battery weight. Assuming a 1 kWh lithium-ion battery weighs about 10 kg, the lithium content would be: $10000g \times 1\% = 100g$ or $10000g \times 3\% = 300g$. This means that a 1 kWh lithium-ion battery contains between 100g and 300g of lithium.
