This would back up only one phase individually. It is possible to back up one, two, and three phases individually. The downside to using this configuration is that each phase is backed up individually and cannot operate three-phase loads during a grid outage. Instead, the solar system would operate as three individual single-phase battery systems.

So you have a 3-phase supply to your place, and you'd like solar with battery backup? Pickings were slim in 2018 when we last reviewed the situation. The good news is, since then, many new hybrid inverter models have entered the market, and full 3-phase backup is now possible without dropping crazy amounts of cash.
