

NES will be providing its OSGP (open smart grid protocol) based smart metering solution, its smart meter operational support system, Grid Operations, and its analytics solutions. The smart grid solution will be ...

The smart grid also enables two-way power flow, and enhanced metering infrastructure capable of self-healing, resilient to attacks, and can forecast future uncertainties. This paper surveys various smart grid frameworks, social, economic, and environmental impacts, energy trading, and integration of renewable energy sources over the years 2015 ...

The integration of sensors and monitoring devices across the grid infrastructure is central to smart grid systems. These sensors continuously collect data on various parameters such as temperature, humidity, wind speed and power flow. This real-time information enables the smart grid to anticipate and respond swiftly to weather-related challenges.

Albania's power grid operator OSSH said on Thursday it has opened a tender for the installation of intelligent electricity measurement system in the power network, with a budget estimated at 120 million leks (\$1.28 million/1.15 million euro).

America's electrical grid was born more than a century ago, when our electricity needs were simple--and our demand for power was much lower. As American homes and businesses take on ever-increasing numbers of electronic devices and technological capabilities, utilities need ways to learn about (and respond to) changing electricity demand in real time.

The energy grid is where these crises meet, and the creation of a smart grid is vital in delivering energy resources in the face of supply disruptions while optimizing usage for a healthier planet. However, converting our current energy grid structures to this new model is a complex endeavor, requiring a systemic way of thinking and an open ...

Tirana Smart City initiative was a collaborative effort between the Municipality of Tirana and UN Albania to promote the development of a smarter city. The event, which was held in the city center of Tirana, featured a range of activities aimed at fostering this goal.

1.1 Emerging smart grids. A smart grid represents an improved electrical grid system employing digital communication technology to oversee, assess, manage, and convey information throughout the supply chain from utility providers to consumers in a manner that is more efficient, dependable, and environmentally sustainable [] integrates modern information ...

Enter the smart grid (SG), heralding a paradigm shift in electricity delivery. The SG integrates modern

telecommunication and sensing technologies to enhance electricity delivery strategies (Blumsack and Fernandez, 2012). Unlike the traditional unidirectional grid, the SG introduces a bidirectional framework, facilitating a bidirectional flow of information and ...

The integration of sensors and monitoring devices across the grid infrastructure is central to smart grid systems. These sensors continuously collect data on various parameters such as temperature, humidity, wind speed and ...

1 INTRODUCTION. Smart grids (SGs) are intelligent electric network models that incorporate the actions of all connected end users, including internet of things (IoT) devices []. This infrastructure enables seamless communication between users and grid operators, supporting various applications, such as self-healing, automation of the power grid, and integration of ...

California-based Networked Energy Services Corporation (NES) has completed the deployment phase of its smart grid project with the Oshee electricity distribution operator in Albania. The previously announced project ...

Albania's infrastructure ministry said it has signed a memorandum of understanding (MoU) with Azerbaijan's state-owned gas company SOCAR for the construction of a natural gas distribution system in Albania's southern city of Korca. ... Albania, Azerbaijan sign MoU on municipal-scale gas grid project.

Albania is a net importer of electricity; power supply security is a challenge. ... Smart grid solution equipment and services; Renewable Power equipment and technologies including hydro, solar, and wind. Design and Engineering services; Opportunities. The energy sector represents good investment and trade opportunities in a variety of areas ...

IET Smart Grid operates under a single-blind peer review model. Papers will only be sent to review if the Editor-in-Chief (or designated Editor) determines that the paper meets the appropriate quality and relevance requirements.

The EBRD provided a EUR37 million to the Macedonian Transmission System Operator AD to support the construction of the interconnector and for the introduction of smart grid components, which improve energy forecasting and facilitate the integration of renewables into the power system. The EU co-financed the investment with a EUR12 million grant ...
