

Why is ammonia used in industrial refrigeration?

Ammonia has been widely used in industrial refrigeration for over a century due to its excellent thermodynamic properties. Ammonia refrigeration systems are commonly found in large cold storage facilities, food processing plants, breweries, and other industries where reliable and efficient cooling is essential.

How do ammonia refrigeration systems work?

As the ammonia absorbs heat from the source (such as the air or the produce to be cooled), it evaporates into a low-pressure gas and is returned to the compressor's suction. Ammonia refrigeration systems offer several advantages, making them a preferred choice in various industrial applications:

Is ammonia a good refrigerant?

It has zero ozone depletion potential (ODP) and low global warming potential (GWP). These attributes make it an environmentally friendly choice compared to many other refrigerants. An ammonia refrigeration system consists of several key components, each serving a specific role in the cooling process:

Could ammonia be a long-term energy storage medium?

As reported by Wen and Aziz in their previous work, ammonia could serve as a long-term energy storage medium to address the intermittency of renewable energy. Another previous study has also demonstrated that, compared to other chemicals such as methanol, ammonia is a more competitive energy carrier.

How will the ammonia import terminal work?

The ammonia import terminal will include a storage tank facility that will have a double wall structure instead of a single wall structure to ensure safety. To improve the safety of the storage tank, detection and blocking systems will be installed and real-time environmental material monitoring systems.

Can ammonia be used as a feedstock for hydrogen production?

The objective of this study is to investigate the feasibility of an electricity generation system utilizing ammonia as a feedstock for hydrogen production in a commercial hydrogen fuel cell, with a targeted power capacity of 1.0-5.0 MW, which is suitable for distributed stationary applications.
