Should solar panels be mounted on the ground?

Mounting solar panels on the ground instead of on a roof has benefits and drawbacks. As its name suggests, a ground-mounted solar system is a free-standing solar array mounted on the ground using either a rigid metal frame or atop a single pole.

Should I choose a roof or a ground-mounted solar system?

If your roof works for solar and can fit enough solar panels to meet your energy needs, it's usually best to choose rooftop solar panels. If you need a really large system that won't fit on your roof and you have enough open land, opt for ground-mounted panels.

Are ground-mounted solar panels better than rooftop solar panels?

Ground-mounted solar panels have some advantages over rooftop panels, but come up short elsewhere. Most standard ground-mounted solar arrays involve metal framing that is driven into or secured to the ground, typically with cement. There are any number of configurations that can be achieved using various racking and mounting systems.

Do rooftop solar panels take up a lot of space?

While rooftop panels don't take up any space that's regularly used otherwise, ground-mounted solar systems might consume coveted backyard space. Typically ground mounting is going to cost a bit more, but it really is a case-by-case evaluation process.

Can you install solar panels yourself?

Installing a ground-mounted solar panels system is simpler than installing a rooftop solar panels system. Hence, it is possible to install your solar panels yourself in your backyard with little expertise. However, this doesn't rule out the need to hire an expert for your ground-mounted solar installation.

Should you put solar panels on your roof?

The true advantage of ground-mounted panels is that they don't have to go on your roof. If your house is in a nice, shady spot but you've got a sunny backyard, you can put them there. Rooftop panels are also captive to your roof design, which may not be ideal since solar panels work best at a specific slope and direction.
