

What are the issues affecting energy supply in Armenia?

However, issues related to energy supply, electricity market liberalization, and administration remain. Armenia has limited energy resources and can meet only a fraction of the total demand for energy from domestic resources. Armenia does not have oil or natural gas reserves and is thus highly dependent on imported energy resources.

Does Armenia have solar power?

In June 2016, the Armenian Parliament updated the law "On Energy Saving and Renewable Energy" which encourages the use of solar power in the country and allows users of solar installations of 150 kW or less to sell their excess energy back to the electrical grid. The voltage in Armenia is 220 V AC at a frequency of 50 Hz.

How much solar power will Armenia have in 2024?

The government expects solar PV capacity to reach 100 MW by 2024 and 1,000 MW by 2030. According to the Ministry of Territorial Administration and Infrastructure, which oversees the energy sector, wind energy potential in Armenia is approximately 450 MW of total installed capacity.

Where does Armenia's electricity come from?

Out of 3213.2 MW of installed capacity in Armenia, the largest portion of electricity generation comes from Metsamor Nuclear Power Plant at 38%, 33% from hydro power plants, 22% from gas-fired power plants, and the remaining 7% from other renewable sources.

How many power plants does Armenia have?

The country also has eleven hydroelectric power plants and has plans to build a geothermal power plant in Syunik. Most of the rest of Armenia's electricity is generated by the natural gas-fired thermal power plants in Yerevan (completed in 2010) and Hrazdan.
