What is a solar lift?

The Solarlift, also called a panel lift or PV panel lift, is an economical solution for the speedy and safe transport of photovoltaic and solar panels. Specially designed with a custom carrier that functions as a cargo receptacle, GEDA's solar panel lift is a time-saving space-saving way to reach inaccessible loading areas.

What is a Geda solar panel lift?

Specially designed with a custom carrier that functions as a cargo receptacle, GEDA's solar panel lift is a time-saving space-saving way to reach inaccessible loading areas. At Mace Industries, we don't just sell you the machines and wave you goodbye.

How does a PV module work?

The device uses your existing fiberglass Werner or Louisville extension ladder. A pulley system is attached to the top of the ladder. A patented module "hook" attaches to the edge of a PV module frame and prevents lateral sliding of the module in the hook. An operator pulls the rope to raise the module.

What is a solarlift & how does it work?

Solarlift is a reliable device on every construction site to transport and assemble solar panels and photovoltaic systems securely. The Solarlift also comes with an extra post that supports the ladder segments for heavy loads. The German-engineered device convinces with an amazing set-up time of only 18 minutes.

What is a Solmetric module lift?

Description The Solmetric Module Lift is designed to safely and quickly transport a PV module to a roof. The device uses your existing fiberglass Werner or Louisville extension ladder. A pulley system is attached to the top of the ladder.

How does a PV ladder work?

A pulley system is attached to the top of the ladder. A patented module "hook" attaches to the edge of a PV module frame and prevents lateral sliding of the module in the hook. An operator pulls the rope to raise the module. The module slides along the outward facing surface of the ladder rails.
