

Belgium future and energy company

Will Belgium become more reliant on electricity imports?

If policy remains unchanged, we will see Belgium's dependence on electricity imports steadily increase, from 50-60 TWh in 2036 to 70-90 TWh in 2050. Without a long-term strategy on the future energy mix and new policy measures, Belgium will therefore become more reliant on electricity imports.

Will Belgium's dependence on electricity increase in 10 years?

However, due to the rising demand for electricity, this will no longer be sufficient in 10 years' time. If policy remains unchanged, we will see Belgium's dependence on electricity imports steadily increase, from 50-60 TWh in 2036 to 70-90 TWh in 2050.

Will Belgium's energy mix be reliant on imports in 2035-2050?

Belgium's existing generation facilities and already-approved investments can provide only half of what is needed in the long term. Therefore, new governments will soon have to consider the desired energy mix for the period 2035-2050 and how reliant the country is willing to be on imports.
