

Belgium sun driven solar

Why should you install solar panels in Belgium?

With enough solar panels, you will be significantly less dependent on your energy provider and are able to use completely green electricity. Solar panels can also help you with lowering your energy bills. There are two different types of solar panels in Belgium you can install: What Are Solar Thermal Panels?

How much solar power does Belgium have?

Belgium had 4,254 MW of solar power generating 3,563 GWh of electricity in 2018. In 2015 PV solar power accounted for around 4% of Belgium's total electricity demand, the 4th highest penetration figure in the world, although the country is some way behind the leaders Germany, Italy and Greece at between 7% and 8% of electricity demand.

Where can I install solar panels in Belgium?

For the installation of solar panels on the ground, on a protected building or in other regulated cases, you will have to contact your municipality. There are several companies active in Belgium that install solar panels.

Is photovoltaic a good investment in Belgium?

Today, photovoltaics is an affordable investment for all Belgian households. The price of panels has fallen sharply over time (divided by 6 in 10 years!). Today's banks are ready to finance photovoltaic projects thanks to their long-standing proven profitability.

Does Belgium offer a green energy contract?

More and more energy suppliers in Belgium are investing in renewable energy and sometimes even become producers themselves. Apart from the green energy providers in Belgium, there are also energy providers who just offer a green energy contract. Do you want to subscribe to a green energy contract?

Can you use a wind turbine in Belgium?

There are small wind turbines made for residential use, but in Belgium you are better off using solar panels for your home. In the case of wind turbines, you will need planning permission from your local authority, and this is not easy to get.
