Overview Advantages Origin and development Market Implementation Drawbacks See also External links The most noteworthy advantage in creating a negawatt market is the cost incentive. As many will say, "The cheapest watt is the one that's never created." In this market, the consumers who increase their home efficiency, or decrease their energy consumption, can earn money by selling the saved electricity. This is similar to an emissions trading or a cap-and-trade system, in which the energy that is not used can be bought from the consumers who saved the energy and sold to th...

Um negawatt-hora é uma unidade de energia economizada como resultado direto de medidas de conservação de energia, como a redução do uso de calor ou eletricidade. O conceito foi desenvolvido depois de Amory Lovins ter escrito um artigo publicado na edição de 21 de março de 1985 da Public Utilities Fortnightly, argumentando que as empresas de serviços públicos ...
