

What is Greenland's domestic energy demand?

All scenarios include Greenland's domestic energy demand. The list of scenarios is as follows: "Steady Europe": In 2030, 1.65% of European demand for liquid hydrocarbons is included, in addition to 5% of European demand for e-ammonia and e-methanol. In 2050, 10% of the demand for e-FTL, e-ammonia, and e-methanol is supplied.

Does Greenland have a diesel price?

Therefore the consumer diesel price in Qaanaaq is the same as in the much farther south Nuuk. The only tax imposed on fuel is a small environmental tax, unlike Denmark and other European countries that apply energy, CO<sub>2</sub>, NO<sub>x</sub>, and value added taxes. The consumer price of fuel in Greenland is therefore very low compared to Europe.

Does Greenland have a future for renewables?

Although Greenland has made great strides in installing renewables, these changes have so far mostly benefited larger communities in the south of the country. Making cheap, accessible renewables work in Qaanaaq has the potential to "be good not only for this community, but for all Arctic areas", however remote, Oshima says.

Is Greenland a fuel synthesis hub?

5.2. Greenland as a fuel synthesis hub Studies have shown that e-fuels and e-chemicals are expected to be an essential part for the defossilisation of industries such as steelmaking [72,73], cement, chemical industry for e-ammonia, e-methanol, and industry-wide [76,77], and long-range transportation [78,79].
