

What is Bess & why is it important in Vietnam?

BESS emerges as a critical enabler in Vietnam's transition towards a future of energy efficiency, security, and sustainability. By storing surplus energy during low-demand hours and utilising it in times of high demand, BESS eliminates power shortages and blackouts, thus enhancing the reliability of the grid and reducing electricity costs.

How can Bess help Vietnam achieve energy transition objectives?

Beyond grid stabilization, BESS plays a pivotal role in advancing Vietnam's energy transition objectives. By effectively managing energy supply and demand, BESS contributes significantly to achieving targets for renewable energy adoption and diminishing reliance on fossil fuels.

Is Bess technology a viable option in Vietnam?

(Source: Nang luong Viet Nam Magazine.) Although BESS technology initially faces cost challenges, rapid global market expansion and advancements in battery technology are progressively making it more viable. Vietnam has acknowledged the potential of BESS and has articulated plans for its extensive integration into the national grid.

Could Bess be useful for a country like Vietnam?

As an example of how BESS could be useful for a country like Vietnam, currently the country has approximately 320 solar power projects (with a capacity of 34,000 MW) and 300 wind power projects (with a capacity of about 74,000 MW) proposed to be fed into the National/Provincial Power Development Plan between 2021 and 2023.

Can Bess be integrated into Vietnam's power grid?

In an effort to facilitate the integration of BESS into Vietnam's power grid, the Electricity and Renewable Energy Authority (EREA) of the Ministry of Industry and Trade recently hosted a technical workshop in collaboration with GEAPP.

What is Bess and why is it important?

By effectively managing energy supply and demand, BESS contributes significantly to achieving targets for renewable energy adoption and diminishing reliance on fossil fuels. Furthermore, this technology catalyzes innovation, drives economic growth, and creates new avenues for employment within the clean energy sector.
