

South Korea, November 26, 2024 - Enabling 24/7 carbon-free electricity (24/7 CFE) procurement in Asia Pacific (APAC) could unlock the private investment needed for the region's energy transition, according to 24/7 Carbon-Free Energy Procurement in APAC: Pathways for Companies and Countries, a report from BloombergNEF (BNEF) published in collaboration with the Global ...

BloombergNEF has developed a tiering system for battery cell makers and system integrators. Based on bankability as evidenced by deployment, the system is designed to create a transparent differentiation between the ...

Some long-duration energy storage (LDES) technologies are already cost-competitive with lithium-ion (Li-ion) but will struggle to match the incumbent's cost reduction potential. That's according to BloombergNEF (BNEF), which released its first-ever survey of long-duration energy storage costs last week. Based on 278 cost data points, the ...

While large-scale, front-of-the-meter energy storage is likely to dominate those capacity additions, about a quarter will be deployed at residential and commercial & industrial (C& I) scale, with consumers seeking both higher shares of renewable energy integration and the back up power capability that energy storage can provide. BloombergNEF ...

BloombergNEF recently awarded WEIHENG ECACTUS its prestigious Tier 1 ranking in the "BNEF Energy Storage Tier 1 List 4Q 2024." This recognition highlights WEIHENG ECACTUS's exceptional product ...

Power price spreads are rising this year, after falling in 2023 from the record levels seen in 2022. The increase is partly thanks to higher solar penetration causing record-low daytime prices in markets like Germany and Spain. Business models based...

The global energy storage market will grow to a cumulative 1,095GW/2,850GWh by 2040 from 9GW/17GWh in 2018, attracting \$662 billion in investment over this period. Cheaper batteries are enabling usage in more applications, including for energy...

RCT Power is proud to announce its inclusion in the Q4 2024 Global Tier 1 Energy Storage Manufacturers List released by Bloomberg New Energy Finance (BNEF). This prestigious recognition underscores RCT Power's commitment to excellence in energy storage technology and its continuous innovation in producing high-quality energy solutions. BloombergNEF is ...

Energy storage system costs stay above \$300/kWh for a turnkey four-hour duration system. In 2022, rising

raw material and component prices led to the first increase in energy storage system costs since BNEF started its ESS cost survey in 2017. Costs are expected to remain high in 2023 before dropping in 2024.

Energy storage hit another record year in 2022, adding 16 gigawatts/35 gigawatt-hours of capacity, up 68% from 2021. Beyond record additions, several markets announced ambitious energy storage targets totaling more than 130GW by 2030, although BloombergNEF remains cautious on its impact on forecast demand given the lack of policy ...

Study shows that long-duration energy storage technologies are now mature enough to understand costs as deployment gets under way. New York/San Francisco, May 30, 2024 - Long-duration energy storage, or LDES, is rapidly garnering interest worldwide as the day it will out-compete lithium-ion batteries in some markets approaches and as decarbonization ...

A month ago, BloombergNEF's analysts also produced another report predicting a global boom in BESS installations, calling the 2020s "the energy storage decade". BloombergNEF forecast global cumulative deployments to reach 358GW / 1,028GWh by 2030, with more than US\$260 billion to be invested to get there, from 17GW / 34GWh online as of ...

BNEF: Power Transition Trends 2024 and the 2H 2024 Renewable Energy Investment Tracker also showed that nearly 91% of global net power capacity additions came from solar and wind in 2023 versus 6% from fossil fuels, renewable energy attracted \$313 billion of new investment in the first half of 2024 -- similar to the same period in the prior ...

You can read our coverage of BloombergNEF's new list here, which reveals a small number of the companies included, courtesy of BloombergNEF energy storage research head Yayoi Sekine. Sekine also commented on one of the firm's key takeaways from putting it together, namely the "significant uptick of lesser known suppliers, especially from ...

BloombergNEF (BNEF) has ranked China #1 among the countries of the world most involved in the lithium-ion battery supply chain in 2020, with Japan and South Korea in second and third place respectively. ... expected given its huge investments and the policies the country has implemented over the past decade," BNEF head of energy storage James ...

The global energy storage market is growing faster than ever. Deployments in 2023 came in at 44GW/96GWh, a nearly threefold increase from a year ago and the largest year-on-year jump on record. BloombergNEF expects 67GW/155GWh will be added in 2024,...
