Who is Das energy?

DAS Energy Ltd. was founded in 2010 on the basis of this research. As DAS Energy's PV modules became ready for market, Dries sold off Diamond Aircraft to focus on photovoltaics as his main business. "Our vision is to take energy to wherever it is needed.

What type of energy system does Bolivia use?

Similar to the country's total energy system, the power sector relies heavily on natural gas (AETN, 2016). The electricity network in Bolivia is broken into two classifications: the National Interconnected System (SIN) and the Isolated Systems (SAs).

What are the potential development scenarios for the Bolivian energy system?

This study presents a general overview of the Bolivian energy system and an array of potential development scenarios based on a mix of management and goal-based measures. In a BAU scenario the energy demands would double in each sector in a period of 20 years, between 2020 and 2040.

What is the energy sector in Bolivia?

The Bolivian energy sector, which is almost completely nationalized, is headed by the MHE (Ministerio de Hidrocarburos del Estado Plurinacional de Bolivia) whose mission, according to their website, is to create policies that promote the integrated development of the energy sector in a manner that is equitable and in harmony with Mother Earth.

What is Bolivia's energy mix?

Bolivia's overall energy mix is dominated by fossil fuels, with natural gas (50%) and petroleum products (31%) supplying most of the country's energy in 2020. In 2021, Bolivia's national electricity agency ENDE announced its intention to generate up to 80% of the country's power from renewable sources by 2025.

Will Electric based heating drive the transition in Bolivia?

Heating demand in Bolivia transitions from a system dominated by natural gas and biomass to a largely electrified heating sector. Because of the low cost of renewable electricity, electric based heating will drive the transition for Bolivia's heat sector. Fig. 13.

Currently, energy production in Bolivia is based heavily on natural gas: it accounts for 80.7% of total domestic generation. Liquid hydrocarbons (oil, condensate and natural gasoline) follow with 13.9%.
