

Bouvet Island and solar

Where is Bouvet Island?

Bouvet Island (/ˈbuːveɪ /BOO-vay; Norwegian: Bouvetøya [buˈvøːəY?]) is an uninhabited island and dependency of Norway. It is a protected nature reserve. It is a subantarctic volcanic island, situated in the South Atlantic Ocean at the southern end of the Mid-Atlantic Ridge, and is the world's most remote island.

Why is Bouvet Island a remote island?

This uninhabited volcanic island in Antarctica is almost entirely covered by glaciers, making it difficult to approach. Bouvet Island is recognized as the most remote island on Earth because it is furthest from any other point of land (1,639 km from Antarctica).

How far is Bouvet Island from Antarctica?

Bouvet Island is one of the most remote islands in the world. The closest land is Queen Maud Land of Antarctica, which is 1,700 km (1,100 mi) to the south,; 58 and Gough Island, 1,845 km (1,146 mi) to the north.

How did Bouvet Island become a dependency?

The expedition carried out aerial photography of the island and was the first Antarctic expedition to use aircraft. : 64 The Dependency Act, passed by the Parliament of Norway on 27 February 1930, established Bouvet Island as a Norwegian dependency, along with Peter I Island and Queen Maud Land.

Is Bouvet Island a good place to visit?

At the time of publication, it represented the best available science. There is perhaps no better place to get away from it all than Norway's Bouvet Island.

Could Bouvet tell us about the past climate of Antarctica?

One minute the skies are clear, the next you're surrounded by cloud. No wonder sailors call Bouvet the world's most remote island; no wonder writers and science fiction movie-makers keep using it in their storylines. But this loner is drawing increasing scientific interest for what it could tell us about the past climate of Antarctica.
