Bouvetøya is located at 54°25?S, 3°20?A, 2500 kilometres southwest of South Africa, 1600 kilometres from Gough Island and 1700 kilometres north of the coast of Dronning Maud Land. The island is not part of Antarctica, which is defined as the area south of 60 °S. The island measures only 49 square kilometres, and is almost entirely covered by ice.

Bouvet Island was discovered in 1739 by a French naval officer after whom it is named. No claim was made until 1825, when the British flag was raised. A few expeditions visited the island in the late 19th century. In 1929, the UK waived its claim in favor of Norway, which had occupied the island two years previously.

Record energy consumption, record renewable power generation, and record fossil fuel consumption - the Statistical Review of World Energy shows progress can be enigmatic. In the U.S., amid the early days of the AI boom and a boom in manufacturing, our dependence on fossil fuels decreased from 2022.

Die Bouvetinsel [bu've-] (norwegisch Bouvetøya) ist eine unbewohnte Vulkaninsel auf dem Südatlantischen Rücken, 2500 Kilometer südwestlich des südafrikanischen Kaps der Guten Hoffnung.Sie bildet zusammen mit einigen ...

KPMG is proud to be working in association with the Energy Institute on the 2023 Statistical Review of World Energy, the go-to source of energy data globally. The Review, newly produced by the Energy Institute, has been providing timely, comprehensive, and objective data to the energy community since 1952. ... Visit our careers section or ...

The current alternatives are energy poverty or fossil-fuels and greenhouse gases. The chart here is a version of the scatter plot above and summarizes the two global energy problems: In purple are those that live in energy poverty, in blue those whose greenhouse gas emissions are too high if we want to avoid severe climate change.
