

# Can private individuals use solar power

Can solar panels be used to generate electricity?

Solar panels can be used to generate electricity in almost all locations. Solar farms produce large amounts of power, though an increasing number of homeowners are getting solar panels for their house. With solar panels at home, you can generate your own power.

Can solar panels power a house?

While solar panels have the capability to generate enough electricity to power a house, there are a few variables that should be considered before making the jump to running your home completely on solar energy. The design of the house and the roof's surface will impact how many solar panels you will be able to have installed.

Are solar panels right for you & your home?

So, how do you know if they are right for you and your home? There are many benefits of solar panels. Not only will they generate clean energy, but they will provide energy all year round, and their life span is around 25 years, making them a good investment.

Will solar panels generate enough electricity year-round?

Whether they'll generate enough electricity for your home year-round will depend on: if your solar panel system works in a power cut. It may be more realistic to think about whether you can be self-sufficient for the brighter parts of the year, and then top up your energy use from the grid at other times.

Is solar energy always available?

Even in the middle of nowhere, solar energy will always be available. Though it's renewable, solar energy isn't constantly available. Solar photovoltaic (PV) panels work best when the sunlight is bright. On overcast days, they'll generate less power. At night, they'll do nothing at all.

Do you own solar panels?

You OWN the solar panels. Under these schemes, you pay for solar panels over a fixed period, say 20 years. There are no upfront costs, and instead you pay a monthly fee, which usually covers the solar panel and battery installation, repairs and maintenance.
