

Why did verkor join the next 40 program?

This announcement rewards Verkor and recognizes its importance in the development of the electric battery sector, which is essential for French and European sovereignty and competitiveness. Verkor, a European pioneer in low-carbon batteries designed for electric vehicles, is among the 2023 class of the Next 40 program.

Is verkor the next 40?

Verkor, a European pioneer in low-carbon batteries designed for electric vehicles, is among the 2023 class of the Next 40 program. The latter offers support designed for French scale-ups capable of becoming world-class technological leaders. This announcement rewards a very rich year for Verkor and marks an important milestone in its development.

What is LFP technology?

It eliminates the module level in the batteries, and the cells are arranged directly in the pack. With this approach and the introduction of LFP technology, Renault aims to save around 20 per cent of the costs of its vehicle batteries from the beginning of 2026. The models in which the innovations will be used are not specified.

How much money will verkor receive from France?

Verkor will also receive around EUR650m in subsidies primarily from the French State under the "France 2030" plan, including the support of the Hauts-de-France region and the Dunkirk urban community, which will issue EUR60m and EUR30m in subsidies respectively.

When will LFP batteries be available?

The first models with LFP batteries from CATL or LGES will launch at the beginning of 2026. Renault's EV subsidiary Ampere wants to install lithium iron phosphate batteries in the first vehicles "in record time."

Which EV manufacturers are using LFP batteries?

The trend towards LFP batteries can be seen throughout the industry. Tesla, Volkswagen, General Motors and several of China's manufacturers - most of the major EV manufacturers are turning to LFP technology, which, just a few years ago, was said to have too low an energy density. However, the development of LFP batteries has progressed rapidly.

Le site de production de Verkor, d'une superficie de 500 000 m², devrait être opérationnel en 2025 et disposera d'une capacité initiale de 16 GWh de cellules lithium-ion par ...

Verkor is launching a unifying project that has the support of a consortium of players from digital, recycling and clean-tech industries. Its goal is to localise the entire value chain in Europe, guaranteeing the optimal use of local skills and resources. Strategy & Innovation.

Verkor can benefit from long-term support from Dassault Systèmes' technical teams while developing its expertise on the 3DEXPERIENCE platform, to drive unprecedented levels of virtualization when it builds its first gigafactory in Dunkirk, France. Verkor will use the 3DEXPERIENCE platform to build the virtual twins of its batteries and the ...

Based on the material and energy consumption data for NCM and LFP recycling stages from the four scenarios mentioned above [44, 45], and utilizing the GaBi model, we constructed life cycle ...

Verkor selects Dunkirk for its first Battery Gigafactory, capacity from 16 GWh in 2025 to 50 GWh by 2030. French industrial company Verkor announces the selection of the port city of Dunkirk (Hauts de France) for the construction of its first Gigafactory for the development of low-carbon battery cells designed to support Europe's net-zero goals.

The results show that at 100% SOC, the normalized gas amount ranges within 0.075-0.105 mol/Ah for NCM batteries and 0.025-0.035 mol/L for LFP batteries, while the maximum gas releasing rate ...

The Verkor plant, where future batteries for Renault's Alpine cars and FlexEVan utility vehicles will be assembled, sits on 80 hectares. "Construction began in 2023," explained David Lefranc ...
