The higher the SEER, the less energy will be consumed for the same amount of cooling. A SEER of 20, for example, will consume around 25% less electricity than a SEER of 16 for the same amount of cooling. Managing your energy usage and getting your air conditioning units serviced regularly will ultimately save you money.

It's crucial to consider the financial and environmental impacts of traditional power plants versus solar farms. A 100 MW traditional natural gas or diesel power plant costs approximately \$104.2 million KYD, providing a reliable 2,400 MWh of electricity daily and increasing household bills by about \$11.40 KYD per month.
