Is storage a transmission asset?

With its SATOA proposal at FERC, MISO is taking a narrow view of storage as a transmission asset, limiting the revenues of storage resources to qualify as a preferred solution to a transmission reliability issue alone. The industry is better off by looking at all the transmission project types available at MISO in its planning function.

Should energy storage be a transmission asset?

Adding a flexible resource like energy storage adds another level of complexity. Focusing on transmission project types and understanding that the business case for a reliability project type will look different relative to an economic project type, enables the storage industry to challenge RTOs and treat storage fairly as a transmission asset.

Does FERC Order 841 treat energy storage as a transmission asset?

Federal Energy Regulatory Commission (FERC) Order 841 mostly treats Electric Storage Resource (ESR) as a generation asset. To date, no FERC order lays out a path for treating energy storage as a transmission asset.

Does CAISO count storage resources as transmission assets?

CAISO does not currently have a method for counting storage resources as transmission assets in a way that enables developers to recover costs through a transmission access charge, the proposed decision says. In the agency's transmission planning process, storage projects are assumed to receive market revenues through a power-purchase agreement.

Can energy storage be part of a transmission solution?

For energy storage to be part of the transmission solution, storage developers need to work with transmission owners and follow the Regional Transmission Organization (RTO) transmission planning protocols. Federal Energy Regulatory Commission (FERC) Order 841 mostly treats Electric Storage Resource (ESR) as a generation asset.

Is energy storage in New transmission line development?

These MISO TOs have recently released a "Transmission Vision Report".<sup>35</sup> The words "energy storage" or "storage technologies" are mentioned 26 times in the report indicating consideration of storage in new transmission line development.

AltaLink, a regulated transmission provider owned by Berkshire Hathaway, will get CA\$1.5 million towards the CA\$3 million cost of evaluating how BESS technology could be used for the transmission grid. Such "storage ...

and integrated view of storage as a resource that can provide both transmission and market services. In the past, the ISO has considered numerous proposals for storage devices to provide cost-of-service based transmission services in the TPPs, and recently the ISO approved two such proposals.

NY-ISO urged New York authorities to adopt the storage as transmission paradigm, while another grid and market operator in the US, ISO New England, produced its own study at the beginning of this year that also ...

o Evaluation of a storage as transmission asset as the more efficient or cost-effective solution to a transmission need  
o Comparison to a traditional transmission solution, including consideration of any attributes that are unique to storage resources when assessing the storage as transmission asset  
o Comparison to market -based solutions

The Solution: Battery-Based Storage as a Transmission Asset Deploying storage as "virtual transmission" is a little-known and simple concept that offers networks new flexibility in meeting capacity needs. Energy storage is placed along a transmission line and operated to inject or absorb real and reactive power, mimicking transmission line ...

In the past, the ISO has considered numerous proposals for storage devices to provide cost-of-service based transmission services in the transmission planning process ("TPP"), and the ISO approved two such proposals in the 2017-2018 TPP. Enabling storage facilities that provide transmission service under a cost-of-service framework, to also

ISO-NE said that storage as transmission-only assets could include a variety of storage resources, including battery technology and pumped hydro. Because they would be built only to serve a transmission reliability purpose, SATOAs will not compete in the electricity markets and will have minimal effect on wholesale prices, according to ISO-NE. ...

Using storage as a transmission asset, or SATA, can yield savings for consumers and limit the impacts on land resources and the environment, said the study by the New York Battery and Energy ...

was the second regional transmission plan to select energy storage as a transmission asset Storage as Transmission: Waupaca, WI Under certain N-1 contingency scenarios, the Waupaca area would be cut off At \$12.2 million over 40 years, a 2.5 MW/5 MWh energy storage system, coupled with line sectionalization, was selected over a \$13.1 million
