Is China a leader in solar PV?

This has solidified the country's position as an undisputed leader in the solar field. What's more, China proudly hosts the world's top ten suppliers of manufacturing equipment for solar PV. The numbers are nothing short of awe-inspiring: China's production of PV panels skyrocketed from 124.6 GW in 2020 to a staggering 288.7 GW by 2022.

How big is China's solar energy capacity in 2020?

In 2020, China saw an increase in annual solar energy installations with 48.4 GW of solar energy capacity being added, accounting for 3.5% of China's energy capacity that year. 2020 is currently the year with the second-largest addition of solar energy capacity in China's history.

Where are solar power plants located in China?

A large part of the solar power capacity installed in China is in the form of large PV power plants in the west of the country, an area much less populated than the eastern part but with better solar resources and available land.

Does China have a solar industry?

And despite all the turmoil, the Chinese solar industry has the manufacturing capacity to meet the demand. Discover all statistics and data on Solar energy in China now on statista.com!

How much solar power does China have?

As of at least 2024, China has one third of the world's installed solar panel capacity. Most of China's solar power is generated within its western provinces and is transferred to other regions of the country.

How has China shaped the solar industry?

The injection of capital has played a decisive role in catapulting China to the forefront of the solar industry. The Chinese government has poured more than USD 50 billion into new solar supply capacity - a figure ten times higher than that of Europe since 2011.
