

Clean operation and maintenance of photovoltaic panels

Do photovoltaic systems need maintenance?

The expansion of photovoltaic systems emphasizes the crucial requirement for effective operations and maintenance, drawing insights from advanced maintenance approaches evident in the wind industry. This review systematically explores the existing literature on the management of photovoltaic operation and maintenance.

What is operation & maintenance (O&M) of photovoltaic (PV) systems?

This guide considers Operation and Maintenance (O&M) of photovoltaic (PV) systems with the goal of reducing the cost of O&M and increasing its effectiveness. Reported O&M costs vary widely, and a more standardized approach to planning and delivering O&M can make costs more predictable.

Should I ask my solar installer to clean my panels?

As a matter of fact, you may also ask your solar installer to clean your panels while he is performing routine technical maintenance. He can execute this task in complete security. Preventive maintenance involves booking an appointment with your solar installer to verify that everything is in order.

How are hybrid solar panels cleaned?

Hybrid solar panels are cleaned in the exact same way as a photovoltaic or thermal panel, meaning with soft, lukewarm water and a non-abrasive sponge. As far as the photovoltaic side is concerned, this procedure is identical to that of a classic panel, which consists of verifying the cables, the production housing, and the solar inverter.

Why is maintenance management important for PV power plants?

Therefore, maintenance management is essential for reliable and effective operation of PV power plants, ensuring uninterrupted system operation and minimizing downtime. Compared to well-established technologies such as hydro, thermal, and wind, the O&M processes for PV systems are not yet fully structured in many operating companies.

How often should a solar installer perform preventive maintenance?

He can execute this task in complete security. Preventive maintenance involves booking an appointment with your solar installer to verify that everything is in order. This procedure should generally occur once a year and differs from curative maintenance, which involves the resolution of an identified fault or failure.
