

Is Madagascar ready for solar power?

With all regions of Madagascar enjoying over 2,800 hours of sunlight per year, the Grande Ile is the perfect location for development of solar power, with a potential capacity of 2,000 kWh/m²/year. The Government is counting on this potential to fulfill its objective of providing energy access to 70% of Malagasy households by 2030.

How much solar power does Madagascar have?

With only a 15% connection rate, Madagascar faces a chronic lack of access to electricity, which hampers its economic and social development. However, there is tremendous potential in terms of solar power, estimated at 2,000 kWh/m²/year as a result of the 2,800 hours of annual sunlight the country enjoys.

Does Madagascar have a business climate?

In the World Bank Group's Doing Business 2018 report that assesses the business climate, Madagascar ranks 184 out of 190 countries for access to electricity. Keenly aware of this challenge, in 2014, the Government of Madagascar decided to embark on intensive reforms to transform the sector.

How can the government finance large-scale solar plants?

To supplement public funds in order to finance large-scale construction of solar plants by promoting private investment, the International Finance Corporation (IFC), the private sector arm of the World Bank Group, is helping the Government set up a public-private partnership (PPP).

L'investissement de la REPP dans le projet solaire photovoltaïque de Malile représente une contribution internationale notable ; l'agenda climatique de Madagascar, notamment l'objectif conditionnel de la NDC (2016) pour une réduction de 14% des émissions de GES d'ici 2030.

The average solar energy potential is estimated 2,000 kW/m²/year, with additional potential for wind energy across multiple regions. The majority of its existing capacity comes from hydroelectric and diesel power plants in limited and poor condition. Madagascar has one utility, the State Power Authority (JIRAMA). More than 10 independent power
