

# Congo Republic beks energy

How does the Democratic Republic of the Congo support the economy?

In the AC, Democratic Republic of the Congo supports an economy six-times larger than today's with only 35% more energy by diversifying its energy mix away from one that is 95% dependent on bioenergy.

Why does the DRC have a poor energy sector?

Even though the DRC possesses prosperous and varied resources for energy generation, the energy sector still falls far behind. This is due to the many problems, which the energy sector faces. In order to expand, improve and develop the country's energy sector, these challenges need to be mitigated and fixed.

What type of energy is used in Congo?

Renewable energy here is the sum of hydropower, wind, solar, geothermal, modern biomass and wave and tidal energy. Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included. This can be an important energy source in lower-income settings. Congo: How much of the country's energy comes from nuclear power?

What is the main energy source in DRC?

Hydropower comes as the number one and major energy supplier in the country, with biomass (wood & agricultural residues) and oil as the secondary ones. 99% of the DRC's produced electricity comes from hydropower, while both oil and gas account for the remaining 1%.

What is the potential of the DRC to generate energy?

The DRC's potential to generate energy is high, having a wide range of both renewable and non-renewable energy sources. The DRC's potential renewable sources are hydropower, biomass, solar, wind and geothermal, while the non-renewables would be oil, natural gas & uranium.

Could the Congo become an electricity exporter?

Almost all electricity generation today comes from hydropower and the Inga project has the potential to provide much more. If network constraints are addressed, Democratic Republic of the Congo could become an electricity exporter.
