

What are the advantages of CEAG star & CG technology?

Central monitoring and control of self-contained luminaires including automatic function- and duration test. All well-proven advantages of the STAR and CG Technology, now available for AC safety power sources. Comfortable visualization software which allows the configuration and monitoring of all CEAG systems.

What is a central battery system?

The central battery system serves for the battery-backed control and emergency supply of an emergency lighting system. The functions of the individual circuits are defined with the help of a user-friendly parameterization system. Requirements: Electronic ballasts/modules of type CG (CEWA GUARD) must be used.

Is CEAG Notlichtsysteme GmbH liable?

Attention! CEAG Notlichtsysteme GmbH will not assume any liability and/or warranty for shortcomings relating to the supply and installation of CEAG safety lighting systems and luminaires that may arise due to other standards and regulations prescribed for or applicable to overall installation packages of which CEAG products form part.

What are the input channels for remote monitoring of the central battery system?

There are two input channels for the remote monitoring of the central battery system. A functional test can be initiated via the input channel „FT“ and a continuous operation test (battery test) can be initiated via the input channel „BT“. Function test ON Function test OFF Battery duration test ON Battery duration test OFF

What if a central battery system is supplied without a battery?

When central battery systems are supplied without battery of the type of battery is unknown the tripple charge-voltage is set up with the factory default of 247.8V at +20°C (means 2.29 V/Z). According to the type of battery the tripple charge-voltage must be fitted at face. Isolate battery circuit.

We are the authorized distributor of RP Technik Germany for the Central Battery System and our service consists of total supply, installation and maintenance. We own the complete range of safety and emergency lighting solutions for use in emergency systems with 230V/216V AC/DC with single lamp monitoring without additional cables, free ...

These subassemblies allow the connection of the central battery system to a central control station (ZLT) or building
 management system (BMS). The most important system states are transmitted via potential-free signalling ...

Central battery systems are perfect for large industrial and commercial environments. From providing high lighting levels to being easy and convenient to maintain, central battery systems boast an array of fantastic advantages. Industries looking for maximum safety and security, will find that central battery systems are an

excellent choice.

External CEAG 3-PM-IO and CEAG 3-PM-IO-INV module To avoid risks from mains failures, it is necessary to permanently monitor the function of the general lighting light distributors in order to switch on the safety lighting in the event of a fault. Thus, the CEAG 3-PM-IO and CEAG 3-PM-IO-INV modules are an important part of the safety system.

Download and read the CEAG ZB-S Central Battery System, a user manual for the ZB-S 26, ZB-S 18, ZB-S LAD, and other models. Learn about features, installation, and operation. ... Mounting and Operating Instructions Central Battery System ZB-S with STAR-Technology 40071860179 (H) November 2017

The ZB-S and US-S Central Battery Systems are exclusively designed to monitor and control a lighting system with general and emergency lighting. Their operation is program controlled.

The leading solutions for central battery emergency lighting from Eaton's portfolio of technologies are designed to save lives in the most demanding industrial, public and commercial environments. Delivering top performance with the expertise, reliability and scalability that your business requires. Systems }
