

# Costa Rica multi energy systems

What is the energy system like in Costa Rica?

Currently, the energy system in Costa Rica is heavily centralised, with the Costa Rican Electricity Institute (ICE), the state-owned power and telecoms provider, by law being the only actor obligated to provide electricity to all sectors and parts of the country.

How will renewables affect Costa Rica's energy system?

Both renewable scenarios will result in a high proportion of variable power generation (PV and wind): 33%-31% by 2030 and 54%-66% by 2050. Such a varied mix of renewables will make Costa Rica's energy system more resilient, efficient and affordable.

Can Costa Rica achieve 100% renewable electricity generation by 2030?

With its ambitious target of achieving 100% renewable electricity generation by 2030, Costa Rica demonstrates the feasibility and benefits of embracing green energy. Through its commitment to decarbonization and reduction of reliance on fossil fuels, Costa Rica paves the way towards a cleaner and more sustainable future.

What is the current electricity supply in Costa Rica?

In Costa Rica's current electricity mix, hydropower is the dominant source at 72%. Overall electricity demand is expected to rise due to economic growth, higher living standards, and the electrification of the transport and industrial sector.

Can Costa Rica achieve a fully decarbonised energy system?

This policy roadmap complements the study "100% Renewable Energy for Costa Rica - A decarbonisation roadmap" by the University of Technology Sydney - Institute for Sustainable Futures. It aims to provide policy pathways for Costa Rica to achieve a fully decarbonised energy system in Costa Rica.

Who is responsible for electric mobility in Costa Rica?

Electric mobility is the responsibility of SEPSE (Secretaría de Planificación del Subsector Energético). For some laws and regulations, however, the Ministry of Public Transport and the Ministry of Environment and Energy share some of these responsibilities. Around 40% of Costa Rica's emissions come from the transport sector (Rodríguez, 2019b).

As the first demonstration project of BESS in Costa Rica, it aims to replace traditional electric power with renewable energy and establish a clean, low-carbon, safe and efficient modern energy system.

Our commercial and industrial clients generally share motivations when it comes to investing in a photovoltaic solar system: an environmental awareness (where they seek to conserve natural resources and mitigate their impact on the planet) and the need to be more profitable, both approaches aimed at greater business sustainability.

Renewable energy in Costa Rica supplied 99.78% of the energy output for the entire nation in 2020. In 2018, 98% of its electrical energy was derived from renewable energy sources, about 72% of which came from hydroelectric power and 15% from geothermal. Currently, Costa Rica generates less than 1% of its energy production using solar power.

Costa Rica Northern is viable for establishing a sustainable energy plant based on residual biomass from the agro-forestry industry. MCAs supported using biomass have the ...
