

What happened to Cuba's energy grid?

People gather in a plaza as Cuba is hit by an island-wide blackout, in Havana, Cuba, October 18, 2024. Cuba's energy grid has collapsed, leaving millions without power, the latest in a series of failures on an island struggling from creaking infrastructure, natural disasters and economic turmoil.

Is Cuba generating enough electricity?

Cuba said it was generating only enough electricity to cover about one-sixth of peak demand late on Wednesday, hours after its national grid collapsed leaving millions without power.

Should Cuba update its energy grid?

While small-scale, such renewable energy initiatives can reduce pressure on the energy grid and provide relief in especially vulnerable places. Due to rising temperatures and increasingly unreliable energy infrastructure, action to update Cuba's energy grid is urgently necessary.

What are Cuba's new energy regulations?

Cuba's government last week issued a decree ordering state and private businesses to generate more of their own electricity from renewable resources. The regulations also require businesses to limit their use of air conditioning -- among other measures -- as the country wrestles with the increasingly dire energy crisis.

Is Cuba's energy infrastructure in a precarious state of aging and disrepair?

The report highlights the issue that not only is Cuba's energy infrastructure in a precarious state of aging and disrepair, but also that its entire energy system relies heavily on external aid and imported fossil fuels.

Will new energy regulations improve long-term energy security for Cuba?

While the new regulations could help improve long-term energy security for Cuba, the government is doing little to alleviate the immediate effects of the energy crisis.

Renewable energy sector profile - Havana, Cuba Sector overview. 2022. Cuba Footnote i is the largest island in the Caribbean Sea, with a 109,884 km² territory and 11.2 million inhabitants. Energy production, particularly power generation and its sustained growth, constitutes an indispensable element for the country's economic and social growth.

As noted above, renewable energy in Cuba, excluding hydropower, does not have a decisive influence on electricity generation. Thus, the total electricity production from renewable sources in 2022, excluding hydropower, was 0.67 TWh (see sources in Fig. 7). Figure 7.
