

What is a LiFePO4 battery?

These batteries form part of the newest in Solar Battery technology. They have low toxicity level, well-defined performance and long term stability. These are a few features that make LiFePO4 batteries the favourite in the solar industry. From Solar Storage to motor vehicles, their popularity is ever-growing. kWh is a measurement of energy.

How long does a LiFePO4 solar battery last?

LiFePO4 solar batteries generally achieve a cycle life of more than 5000 times. In the energy storage field, lithium solar batteries, including LiFePO4, are typically required to last for more than 3,500 cycles. Therefore, the life span of a LiFePO4 solar battery for energy storage is more than 10 years.

Can you add more batteries to a LiFePO4 Solar System?

Depending on the brand, you can add many batteries together. The real magic of LiFePO4 solar batteries is that you have the power of choice over the capacity. If you decide to start small, you can always add more batteries as your needs change. While you can connect two different sized batteries, they will need to be of the same brand.

Are LiFePO4 solar batteries wall-mounted or stackable?

Most LiFePO4 solar batteries are either wall-mounted or stackable. And you're able to buy brackets or cabinets to house your LiFePO4 batteries, keeping them out of the way. We always recommend that you have a professional do the installation for you.

Can LiFePO4 batteries be charged at 50°C?

LiFePO4 batteries can work as usual at 50°C. Weakness: Not allowed to charge below 0°C. All lithium batteries are not recommended to charge below 0°C. That's why we developed an internal self-heating solution. This solution can be charged at room temperature above -10°C, adapted to cold weather.
