

DC Microgrid DC Fault Protection

What are the challenges of dc microgrid protection?

In this paper, the challenges of DC microgrid protection are investigated from various aspects including, dc fault current characteristics, ground systems, fault detection methods, protective devices, and fault location methods. In each part, a comprehensive review has been carried out.

How to protect a dc microgrid?

Hence, a grounding system must minimise the DC stray current and common mode voltage . In recent years, several protection methods have been reported to protect the DC microgrid. In the AC systems, distance protection uses the analysis of the symmetrical component to avoid the impact of fault resistance on the protection method.

How to solve fault protection problems in DC microgrids?

Protection schemes must provide an adaptive fault protection algorithm solve protection problems considering variation of topologies. Develop a method for fault detection in DC microgrids which is independent of fault impedance. Considering the dynamic behaviour of renewable energy resources to increase the accuracy of models.

What is low voltage dc microgrid protection scheme?

Low Voltage (LV) DC microgrid protection scheme is designed based on the natural characteristics of the fault current. To select the threshold value artificial line inductance (ALI) technology is used here. oFault detection time is very low (less than 250 ms.

How to detect faults in dc microgrid based on local measurement units?

In , a protection scheme was proposed for fault detection in DC microgrid based on the local measurement units. It uses first- and second-order derivative for detecting faults. Yet, the problem with this method is depending on the system topology.

What is dc microgrid protection scheme?

A protection scheme of DC microgrid by using local measurements and the characteristics of the system parameters. The scheme is independent of the communication network of the MG. oQuick discrimination of faults of DC microgrids. oVariation of the communication system in the DC MG is not affect the protection scheme.
