What is a solar design tool?

Our Solar Design Tool simplifies solar system planning by prioritizing batteries support and self-consumption. Maximize your solar investment with our intuitive software platform. With this feature, you can seamlessly design the mounting system layout for your solar installation. Transfer your solar designs to PVSyst & AutoCAD.

How do I design a photovoltaic and solar hot water system?

Provide an architectural drawing and riser diagram for the homeowner showing the planned location for future photovoltaic and solar hot water system components. Space requirements and layout for photovoltaic and solar water heating system components should be taken into account early in the design process.

Do I need to redraw my module layout in PVSyst?

There's no need to redraw your module lay-out in PVsyst. Thanks to our pv plugin, you can simply export your drawings from AutoCAD or BricsCAD to within seconds and start simulating the performance and yield of your system immediately. Both fixed tilt and tracker systems are supported by the .PVC export format or .CSV of ground mesh.

How does pvcad auto-populate a template?

Instead of manually entering system data into the site plan, the array layout, the single-line diagram, and other documents, PVCAD auto-populates fields in the template. For example, PVCAD's IronRidge templates side cutouts of the IronRidge mounting system in the model space.

How do I generate a Module & rack layout?

Generate your module and rack layout in seconds on a complex 3D mesh or TIN surface. The row pitch can be fixed or variable based on a predefined shadow angle. A variable row pitch will lead to smaller inter-row distance when building uphill, and larger inter-row distance when downhill.
