

Do you regret installing solar power

Why do homeowners regret installing solar panels?

Low-quality or poor-standard panels may cause more problems than they solve. Solar panel manufacturers often promise high output levels for their products. However, if these promises aren't met due to inferior materials or manufacturing processes, it's easy to see why homeowners regret installing solar.

Should you install solar panels again if you move home?

Imagining your house filled with mess from a lengthy installation could be enough to put you off considering solar panels. But few owners complained to us about the installation being disruptive, and 80% said that they'd install solar panels again if they moved home.

Do you regret buying a solar system?

The majority of solar regrets fall into two categories: Leases and PPAs are often advertised as "free solar" in order to lure people into signing a long-term contract that's far less favorable than purchasing a solar system. These agreements often become troublesome when the homeowner tries to sell the house.

Should I DIY my solar panel installation?

If you choose to DIY your solar panel installation, the least you should do is have a technician inspect the roof and assess how many more years there are in it. As a rule of thumb, if your roof is in decent shape and is likely to keep your head dry for another 15-20 years, go ahead and panel it up.

Can solar panels rain on a solar parade?

Solar panel installation might seem like a breeze, but there are common challenges that can rain on your solar parade. One such challenge is the positioning of the panels for optimal sunlight coverage. Installing solar panels isn't just about slapping them onto your roof anywhere you please.

Do solar panels deteriorate a lot?

Let me share an intriguing statistic with you. Solar panels experience an annual degradation rate of 0.5%. This means that each year, your panel's capacity to produce electricity reduces by half a percent.
