

Dominican Republic saving energy in your home

Is solar energy a viable resource for the Dominican Republic?

High solar potential, along with integrating efficiencies and economies of scale, can make solar energy a viable resource for the Dominican Republic. Similarly, wind energy has strong potential, particularly in the southwest.

How can the Dominican Republic integrate solar and wind resources?

The short-term variability and geographic diversity of the wind resource will need to be studied before implementation of projects. The Dominican Republic has created a framework for integrating solar and wind resources in its grid that can drive renewable energy adoption for years to come.

How much energy will the Dominican Republic save?

This translates into total annual savings of USD 1 billion in the Dominican Republic energy system. A small proportion of the technologies will incur additional costs and will require total investment support of about USD 160 million per year.

How can Dominican Republic decarbonise the energy sector?

New techniques and technologies will be needed to decarbonise these areas. Dominican Republic has adopted a law on incentives for the development of renewable energy sources, which aims to increase the diversity of energy sources, reduce dependence on imported fossil fuels and stimulate investment in renewable energy.

Does the Dominican Republic still need energy?

According to a CNE study (Cruz Castillo, 2014), around 12% of Dominican Republic households still lack modern energy access for cooking, relying mainly on wood fuel and charcoal. Although demand for traditional forms of bioenergy declines significantly, the Reference Case also indicates it persists in 2030.

What role does the Dominican Republic play in transforming energy consumption?

As one of the largest energy users in the Caribbean, the Dominican Republic plays a critical role in transforming the region's energy consumption. The Dominican Republic has implemented institutional and operational changes in its energy sector, including the formation of the Ministry of Energy and Mines (MEM) in 2013.

<p>The implementation of an energy-saving and efficiency policy in all Public Administration bodies under the Executive Branch has been declared a top national priority by President Luis Abinader. This measure was taken by Decree 158-23, issued today. The decree is based on the premise that Administration bodies must adopt measures that serve as a model ...

Dominican Republic saving energy in your home

As of early 2017, 88 percent of the Dominican Republic's energy consumption comes from imported oil products, natural gas, or coal. The Dominican Republic, in partnership with the International Renewable Energy Agency (IRENA) researched a scenario where it cuts that number down to at least 75 percent by the year 2025.

Energy intensity can therefore be a useful metric to monitor. Energy intensity measures the amount of energy consumed per unit of gross domestic product. It effectively measures how efficiently a country uses energy to produce a given amount of economic output. A lower energy intensity means it needs less energy per unit of GDP.

<p>Santo Domingo.- During the "Energy Sector Reform" Forum organized by the Dominican Association of the Electric Industry (ADIE) and the Technological Institute of Santo Domingo (INTEC), Edward Veras, executive director of the National Energy Commission (CNE), emphasized the Dominican Republic's progress in energy storage. He highlighted its crucial ...
