A Hybrid inverter is an intelligent inverter that enables the storage of excess solar energy in a battery system for self-use. Hybrid inverters function like a common grid-tie solar inverter but can generally operate in one of several different modes depending on the application, this includes battery backup mode which provides a limited level of backup power in the event of a blackout.

Wind power produced in Årland covers about 65 per cent of the region's annual electricity consumption. When it is very windy, there is even a surplus of wind power, which can be sold to Sweden. Solar power and a small amount of bioelectricity are also available. In a pinch, Årland can start up two gas turbines fuelled by diesel oil.

Thomas Dalsgaard, partner at CIP said, "The development of the Årland Energy Island project will provide a value increasing route to market for the regional offshore wind supporting the ambitions of Årland regarding local value and job creation as well as supporting the energy transition and energy independence of the wider region. The strong ...
