Over the last ten years, El Salvador has halved its use of fossil fuels for power generation. In 2010, fossil fuels accounted for 40.4% of the country's total electric power generation. Ten years later, however, El Salvador continues to progress in its efforts to become less and less dependent upon this natural resource.

Work has started on a regasification module that will be installed onboard El Salvador's first floating and regasification unit. Courtesy of BW LNG Image courtesy of BW LNG. Once completed, the Wartsila module will be installed onboard Shell's 2002-built LNG carrier Gallina that will be converted to an FSRU.

SAN SALVADOR, E.S. (May 12, 2021) - Global sustainable energy developer Invenergy and global liquefied natural gas (LNG) solutions provider BW LNG today announced that they recently closed a \$128.3 million financial package with IDB Invest to finance the special-built floating storage and regasification unit (FSRU) component of the Energía del Pacífico (EDP) LNG-to ...

El Salvador is solidifying its position as a regional leader in renewable energy, with expectations to close the year with over 10% growth in the sector. This optimistic forecast was shared by Jorge Arriaza, President of the Salvadoran Association of Industrialists (ASI), during the opening of the eleventh Regional Energy Congress (Coren) 2024.

Beyond 2019's Bosphorus Project, which consists of 10 solar plants, AES El Salvador plans to install additional capacity for renewable energy in El Salvador in 2020. The company is advancing an ambitious environmental plan for the region that will allow the affected Central American countries to withdraw or sell some of their fossil fuel ...
