What is energy storage materials & catalytic Energy Materials Research Group?

The focuses of Energy Storage Materials and Catalytic Energy Materials research group at the Institute mainly include electrochemical storage technologies based on rechargeable batteries and hydrogen energy.

Is natural gas a problem in Macao?

As a member of the Smart Energy Group of UM's State Key Laboratory, which focuses on optimising clean energy use and production, Zhang believes expanding the use of natural gas poses major problems, especially in the city's older districts. "Many buildings and [much of the] infrastructure in Macao are outdated.

Does Macao have a photovoltaic energy contract?

The regulations require investors to enter into a 20-year contract for the purchase of photovoltaic energy with Macao's sole energy service provider, Companhia de Electricidade de Macau (CEM). Essentially CEM will purchase the electricity produced to ensure investors profit within a reasonable period.

Does Macao have a climate problem?

As a commercial hub, Macao faces the same challenge. Energy consumption from electricity, transport and buildings accounts for nearly 90 per cent of Macao's carbon emissions directly caused by fossil fuels. With climate change posing grave threats to the future of society, city leaders say they have made reducing emissions a priority.

How can we conserve energy?

For instance, if solar energy becomes a major source of energy in the city in the future, society would need to reduce electricity usage at night, he suggests. Another way to conserve energy is to shift demand away from peak periods, such as hot summer afternoons when demand for air-conditioning is usually highest.
