

Can batteries be used in ESS applications?

Some agencies, such as the Department of Energy (DOE) in the USA, have reported the economic and technical targets of batteries for large-scale ESS applications. In conclusion, various batteries have been gradually applied in different ESS application fields.

How to choose a battery for an ESS?

Thus, a more economic ESS selection can be made by analysing the candidates in detail on the premise of meeting technical requirements, including lifetime, cycle efficiency, and so on. The appropriate batteries for application in ESSs seem to depend mainly on the requirement of different situations.

What impact does EV pricing have on the ESS segment?

EVs represent around 80% of global lithium-ion battery demand, and the knock-on impacts to the ESS segment in terms of raw material pricing are meaningful as DC container suppliers generally apply raw material index pricing to their proposals.

How is battery economy calculated for EES?

Current researches on battery economy for EESs are conducted mainly by the means that investment and income were simply calculated by empirical semi-quantitative formulas and parameters and then analysis the advantages and disadvantages for various batteries [17,20,39,40].

What is the discharge capacity of ESS?

The total discharge capacity of ESS,  $(C_d)$ , is set to 21 MW h in the numerical case. According to GB/T 36,276-2018 and GB/T 36,549-2018, the batteries used for large-scale energy storage needs a retention rate of energy more than 60%.

What is the unit profit of ESS?

The unit profit of ESS,  $(P_e)$ , is 0.15 \$/kW-1 h-1. During the simulation, 365 days per year will be used. The assessment results of the income are shown in Fig. 2.
