

# Eswatini antora batteries

What makes Antora a good thermal battery?

Antora's factory-made thermal batteries flexibly scale to match the energy needs of any industrial facility. Carbonis a time-tested industrial material with no risk of thermal runaway. Always-on heat and power for industrial operations where downtime is not an option.

What does Antora's announcement mean for thermal batteries?

The announcement is a big step forward for thermal batteries (also known as heat batteries), an industry seeking to become a major player in the energy storage sector. Antora's batteries store renewable energy as heat, which can then be used to manufacture industrial products like cement or glass.

Will Antora start producing thermal batteries next year?

Justin Briggs, Antora's co-founder and COO, says the new factory will begin producing thermal batteries next year, though Briggs was tightlipped on naming customers. (The company has technology that will allow its batteries to output both heat and electricity, but the current factory will produce batteries that output only heat at first.)

Who is Antora energy?

Antora Energy, founded by David Bierman SM '14, PhD '17, is commercializing a thermal battery that lets manufacturers use renewable energy around the clock.

Could Antora energy make a big move to decarbonize industrial heat?

Antora Energy is building its first factory to produce thermal batteries. It could be a big move for decarbonizing industrial heat.

Will Antora energy build its first large-scale manufacturing facility in San Jose?

Today Antora Energy, a California-based thermal-battery startup, unveiled its plan to build its first large-scale manufacturing facility in San Jose. The announcement is a big step forward for thermal batteries (also known as heat batteries), an industry seeking to become a major player in the energy storage sector.

Feb 22 (Reuters) - Thermal battery maker Antora Energy on Thursday said it has raised \$150 million in a funding round led by a tie-up between the world's biggest asset manager ...

Antora's batteries store renewable energy as heat, which can then be used to manufacture industrial products like cement or glass. Producing industrial heat accounts for about 20% of all global energy demand, in part

## Eswatini antora batteries

because this process relies heavily on fossil fuels to generate the high temperatures needed to make products. Antora hopes its ...

Antora is already planning to produce batteries domestically, recently launching its new manufacturing facility in San Jose, California. The company has raised \$80 million to date, and operates a pilot plant in Fresno, California. Similar to Rondo, Antora's tech relies on common materials, in this case low-grade carbon blocks.

Antora's thermal battery manufacturing facilities and demonstration unit are located in sun-soaked California, where renewables make up close to a third of all electricity. But Antora's team says its technology holds promise in other regions as increasingly large renewable projects connect to grids across the globe.

This project includes a 200kWh battery energy storage system (BESS) and is one of several ongoing projects by the Eswatini Electricity Company to improve the country's electricity access rates. This profile was published in the African Power & Energy Elites 2023. Read the full mobile-friendly magazine [here](#).

Antora Energy is addressing the intermittent nature of wind and solar with a low-cost, highly efficient thermal battery that stores electricity as heat to allow manufacturers and other energy-hungry businesses to eliminate their ...

energy future," said Frazium Energy director Robert Frazer. "We believe in the strength of Eswatini's future." The company intends to invest beyond the EUR100 million already committed for the solar-storage project in the coming years, Frazer added. "Africa's largest battery is coming, and it is coming to Eswatini.

The Antora Energy team will develop key components for a thermal energy storage system (solid state thermal battery) that stores thermal energy in inexpensive carbon blocks. To charge the battery, power from the grid will heat the blocks to temperatures exceeding 2000°C (3632°F) via resistive heating. To discharge energy, the hot blocks are exposed to ...

US thermal batteries company Antora Energy has completed a USD 150 million (EUR 138m) Series B funding round led by Decarbonization Partners, a joint venture between US investment giant BlackRock and Singapore's sovereign wealth fund Temasek. Image by Antora Energy on X. Antora said last week the capital will allow it to ramp production of its ...
