

Why does Fiji rely on fossil fuels?

National energy production and consumption in Fiji remains highly dependent on imported fossil fuels in part due to the current demands of the transport sector and the ongoing reliance on thermal power plants to supplement renewable energy sources within Fiji's electricity sector.

What is Fiji's Energy Trilemma?

As is the case in most national contexts, the oversight of Fiji's energy sector is defined by the 'energy trilemma' which requires continual efforts to balance the challenges of energy security, energy sustainability, and energy access/equity.

What is Fiji's energy policy?

This Policy will ensure that Fiji's agricultural sector and local industries can benefit from a further source of sustainable, indigenously-sourced energy while minimising any potential impacts on the environment or national food security.

Does Fiji have hydro power?

Hydro power makes the largest contribution from renewable energy resources for electricity production in Fiji. Currently, there is 130 MW of installed capacity of hydro power out of which 0.18 MW is installed by FDoE for off-grid power while the rest is installed by FEA (grid-connected).

How does Fiji provide access to modern energy?

The access to modern energy to rural or remote islands and villages in Fiji is made possible by external aid; namely Chinese, Japanese, US, Korean, Turkish governments, to name a few. The technologies and expertise is provided by external aid. This assists GoF to install and commission renewable energy projects.

Will Fiji be able to produce 100% of electricity by 2030?

10.3.1 To derive as close to 100% of electricity services from renewable energy sources as possible by 2030. In keeping with Fiji's climate change commitments and development goals, Fiji will systematically scale up the transition to renewable energy-based electricity production.
