

Finland cellcube corning

What is the Corning cellcube system?

The Corning CellCube system provides a compact, perfusion-based method for the mass culture of attachment-dependent cells. CellCube modules consist of a series of 10, 25, or 100 parallel, polystyrene plates joined to create thin, sealed laminar flow spaces between adjacent plates.

What surface treatments are available for cellcube modules?

CellCube modules are available with either a Tissue Culture (TC)-treated growth surface or Corning CellBIND[®] surface for cell attachment. The surface treatment is applied to both sides of each layer to achieve available surface area ranging from 8,500 cm² to 85,000 cm² in a compact footprint.

How does the cellcube system work?

Utilizing a perfusion-based design, the CellCube system is able to mimic the constant fluid flow of in vivo conditions and reliably distribute nutrients and oxygen with low differential gradients across all attached cells throughout the modules.

Corning [®]; E-Cube(TM) Culture System Introduction Welcome to the E-Cube Culture System, Corning's unique system for growing large quantities of adherent cells. The E-Cube system is easy to use for the evaluation of perfused parallel-plate growth technology. The E-Cube system is designed to help you determine if the larger CellCube[®]; system is the

CellCube[®] system is the most efficient way to grow large quantities of adherent cells. The E-Cube system is easy to use for the evaluation of perfused parallel-plate growth technology. The E-Cube system is designed to help you determine if the larger CellCube[®] system is the

The CellCube Culture System Clean Room Cart is a device designed for simplified installation, filling, seeding, operation and harvesting of up to four 100-layer CellCube modules. The cart is a stainless steel, autoclavable, mobile ...

The Corning CellCube system provides a compact, perfusion-based method for the mass culture of attachment-dependent cells. CellCube modules consist of a series of 10, 25, or 100 parallel, polystyrene plates joined ...

The Corning CellCube system provides a fast, simple, and compact method for the mass culture of attachment-dependent cells. It uses a tissue culture-treated growth surface for cell attachment, and continually perfuses the cells with fresh medium for increased cell productivity.

CellCube[®] system is the most efficient way to grow large quantities of adherent cells. The E-Cube system is easy to use for the evaluation of perfused parallel-plate growth technology. The E-Cube system is designed to help you determine if the larger CellCube[®] system is the

The CellCube Module is an integral, encapsulated, sterile, single-use device that is 100% pressure-hold tested

Finland cellcube corning

before shipment. It is comprised of a series of parallel, styrene plates joined to create thin, sealed, laminar flow spaces between adjacent plates. Each culture plate receives proprietary tissue culture treatment prior to assembly to ensure dense, uniform cell growth.

The CellCube Module is an integral, encapsulated, sterile, single-use device that is 100% pressure-hold tested before shipment. It is comprised of a series of parallel, styrene plates ...

Introducing Corning's Closed System Cell Cube - a new closed system offering designed to help reduce the risk of adventitious contamination. Our new offering of CellCube 10, 25, 100 modules, circulation loops, and connectors allows for easy adherent cell scale-up that integrate seamlessly with AsepticQuik® and MPC connectors. 85,000 cm²; Surface Area Corning TCT surface ...

The E-Cube(TM) System is a simple bioreactor with 8,500 cm²; cell growth area for growing anchorage dependent cells in only a 25.4 cm x 35.6 cm footprint. Cells grow in Corning's parallel-plate CellCube®; Module on the same treated polystyrene used in Corning culture vessels. The E-Cube(TM) System kit consists of an oxygenator, medium reservoir, multiple access ports, and all ...

The Corning CellCube system provides a compact, perfusion-based method for the mass culture of attachment-dependent cells. CellCube modules are made of polystyrene plates joined together to create thin, sealed laminar flow spaces between adjacent plates and are coated with either a Tissue Culture-treated growth surface or Corning CellBIND® surface to enhance attachment.

CellCube system, the design of the modules allows for reliable distribution of nutrients and oxygen with low differential gradients across all cells within the modules. Corning CellCube 100-layer ...
