What is a floating storage and regasification unit (FSRU)?

Our floating storage and regasification units (FSRUs) act, in all aspects, similar to a land-based terminal. In addition to transporting LNG, our purpose-built FSRUs have the onboard capability to vaporize LNG and deliver natural gas through specially designed offshore and near-shore receiving facilities.

What is a floating storage & regasification unit terminal?

Floating storage and regasification units terminals play a key role in the LNG value chain, forming the interface between LNG carriers and the local gas supply infrastructure. They are versatile, convenient and can make natural gas available to the market faster than land-based installations.

What is the LNG storage capacity of A FSRU?

That vessel has an LNG storage capacity of 263,000 m³ and a regasification capacity of approximately 6 mtpa. That vessel, as with many FSRUs built in recent years, is designed to easily conduct LNG reexports as well as receive STS transfers.

How many FSRU vessels are there?

This completes the list of the current 24 FSRU vessels in operation. In addition to FSRUs, there are four floating storage units (FSUs) currently in operation as listed in Table 3.4. FSUs provide an alternative to onshore LNG storage tanks. They are converted LNG tankers but without the onboard regasification facilities installed on FSRUs.

What are floating storage units (FSUs)?

Floating Storage Units (FSUs) The four FSUs currently in operation are listed in table 12.1. They are all relatively old LNG tankers (with the exception of the Golar Arctic) that have been converted to operate as floating storage units. A further FSU is under conversion for Teekay LNG for the Bahrain Import Terminal.

Can a floating storage unit be added to A FSRU?

If more storage is required this weakness could be mitigated by adding a floating storage unit (FSU). If both more storage and more regas capacity is needed this could be provided by replacing the FSRU with a larger unit e.g. Dubai Explorer 66 or by adding a second or even third FSRU.
