

Generator belt diagram of Fengjun 5

How does a belt driven generator work?

This belt-driven generator supplies ac power to the platform to run tools, lights, and cutting and welding equipment. All power regulation components are located in a control box that is connected by cable to the generator. The generator supplies power when running at the specified speed with the Power switch on (switch is located on platform).

How are parts arranged in a generator set?

Parts are arranged in groups of related items and each illustrated part is defined by a reference number corresponding to the same reference number in the parts list. Parts illustrations are typical. Using the model and specification number from your generator set nameplate, select parts that apply to your set.

How do you reassemble a 7.5 kW generator?

Use hoist and lifting strap to carefully disassemble/reassemble generator. Do not damage rotor or stator windings during this procedure. Mark electrical leads before disassembling unit. Reassemble generator parts. Reconnect all leads. Use cable ties to secure leads away from moving or hot parts. 9-2. Disassembling/Reassembling 7.5 kW Generator

How do I select parts for my generator set?

Using the model and specification number from your generator set nameplate, select parts that apply to your set. Unless otherwise mentioned in the description or page heading, parts are interchangeable between models. Throughout this catalog right and left sides are determined by facing the engine end (front) of the set. 50 60

What numbering system does a generator set use?

This manual uses the following numbering systems: Specification Number. The product identification number located on the generator set nameplate. Specification numbers break down into groups. Group Number. A unique number representing a parts group needed to assemble a generator set function. For example, Group 101 is the Air Intake group.

How do you reassemble a generator?

Reassemble generator parts using torque values in table. Reconnect all leads. Use cable ties to secure leads away from moving or hot parts. Apply SAE 30W oil to both ends of studs before installing. The circuits in this manual can be used for troubleshooting, but there might be minor circuit differences from your machine.
