

Dr. Ivar Kruusenberg is the CEO and Founder of PowerUP Energy Technologies. With a PhD in chemistry from the University of Tartu and a Post-doctoral degree from UC Berkeley, Ivar has more than 16 years of experience in the field of fuel cells and nanomaterials. In 2016, Kruusenberg switched his focus from academia to entrepreneurship.

The main reason is that to date nearly all CO₂ e savings stem from efforts in the electricity sector, where emission reductions are primarily due to the expansion of renewable-energy sources, along with the decommissioning of older conventional power plants and the surcharge for CO₂ within the European emission-trading system. In the first half of 2019, ...

Germany first presented its hydrogen strategy in mid-2020 under the government of then-chancellor Angela Merkel. The strategy already stipulated an in-depth evaluation and possible update after three years. In addition, the incoming ...

While solar panels and wind turbines are a great source of power, their reliability is limited due to weather conditions. With our miniature smart-grid solutions you can complement your green power generation. If other methods aren't ...

Germany is aiming to be climate neutral by 2045 - five years earlier than the European Union. ... e-cars and heat pumps is currently booming, while interest in energy transformation technologies has risen sharply among both businesses and the general public. Having plummeted 15 years ago, the number of jobs in the renewable sector has ...

Fluor Ltd, McDermott International Inc., Wärtsilä Oyj Abp, EPC Engineering & Technologies GmbH, General Electric Company are the major companies operating in Germany Power EPC Market. The Germany Power EPC Market is projected to register a CAGR of greater than 6% during the forecast period (2024-2029)

Wind turbines and solar panels at Lisberg Castle in Germany Energy mix of Germany. Energy in Germany is obtained primarily from fossil fuels, accounting for 77.6% of total energy consumption in 2023, followed by renewables at 19.6%, and 0.7% nuclear power. [1] [2] On 15 April 2023, the three remaining German nuclear reactors were taken offline, completing the country's nuclear ...

Innovative and yet affordable:up! launches with new drive system, safety and information technology Sustainable: 2011 debut with petrol engines; natural gas follows in 2012 and E-motor in 2013 Ingenious: world's first small car ...

These wide bandgap (WBG) technologies hold significant potential and are increasingly crucial for achieving decarbonization objectives. To address the rising long-term demand for efficient power semiconductors, Germany will begin developing and producing all three technologies (SiC, GaN, and silicon) in June 2024.

In the first half of 2023, renewable energy (RE) met slightly more than half of Germany's electricity consumption. This is a remarkable result, mainly achieved thanks to energy efficiency & savings. After phasing out nuclear power on April 15, 2023, Germany replaced a part of its domestic uncompetitive fossil-based electricity generation with imports, mainly RE-based ...

Most other countries' more recent energy transitions have been attempts to achieve net-zero targets using whatever low-carbon technologies are available. Germany's now-famous "Energiewende ...

PowerUP Energy Technologies is an Estonia based cleantech start-up that produces best-in-class hydrogen fuel cell based electric generators and proton exchange membrane fuel cells. PowerUP's technology is based on ...

PowerUp advanced battery analytics software generates value from your Lithium-ion batteries, regardless their chemistry or manufacturer. Ensure an optimized and safe usage of your batteries by processing and interpreting its operational ...

this time, Germany accounted for 33 percent of the renewable buildup within the European Union. In addition, the policy has led to the creation of a considerable "green" industry: German companies used to be global champions in the production of solar-PV cells as well as wind turbines, developing cutting-edge technologies and creating jobs for

Germany is leading among EU countries when it comes to the production of climate technologies like wind power, solar energy, heat pumps, batteries and electrolyzers, Table.Media reports. Those are the conclusions drawn from Brussels-based think tank Bruegel's newly launched European Clean Tech Tracker database, which examined the more than 400 ...

The European nation's energy revolution has made it a leader in replacing nukes and fossil fuels with wind and solar technology. ... Germany got 44 percent of its electricity from coal last year ...
