

The transition of regional energy system over time have attracted extensive attention globally. According to a global energy assessment of International Energy Agency, the renewable energy would account for 63% of global total primary energy supply in 2050 (Gielen et al., 2019). Studies have assessed the effects of China's energy system transformation and the ...

22 ????&#0183; Among the success stories emerging from these partner&#173; ships is Tai On Environmentalist Recycling and Regeneration Factory Limited. Collaborating with GEG since ...

Consumer spending fell to the lowest level since 2012 in Q223 amid tight Covid-19 restrictions. Slightly elevated inflation amid higher global energy prices will also weigh on real household incomes (see chart above), preventing a faster uptick in private consumption growth. We expect Macao, China's economic recovery to solidify further in 2024.

EDP Capital Markets Day 2023 - Presentation. 2023 Annual Integrated Report.

Greenhouse gas (GHG) emissions from energy consumption have become a major focus all over the world. Cities, especially, are playing an important role in responding to the challenges of global climate change. However, there is still a lack of case studies on the whole life stage (including energy import, production, and consumption) at the city level.
