

Google project sunroof St Vincent and Grenadines

Does Project Sunroof work?

Yes, Project Sunroof is specifically designed to help homeowners who are interested in going solar. It provides valuable information about the solar potential of their rooftops and helps them plan and estimate the solar installation costs. How does Project Sunroof access the data from the solar API?

Does Project Sunroof have solar data?

We currently have solar data for portions of 50 states and Washington DC. See if we've got you covered. Project Sunroof is a solar calculator from Google that helps you map your roof's solar savings potential. Learn more, get an estimate and connect with providers.

What is Google Project Sunroof?

Google wants to make installing solar panels easy and understandable for anyone. Project Sunroof puts Google's expansive data in mapping and computing resources to use, helping calculate the best solar plan for customers. Project Sunroof computes how much sunlight hits your roof in a year.

Does Project Sunroof include all buildings in Google Maps?

Project Sunroof data relies on Google's aerial imagery, and not all of the U.S. is covered by this imagery. Project Sunroof calculates the solar potential on buildings which are present in Google Maps (as denoted by outlines in the Maps view), and not all buildings are included in this data.

How much data does sunroof process?

Sunroof processes roughly 1 petabyte (1,000 terabytes) of data: height and color for 43 million homes; weather information; about 1,000 state and local incentives; and hundreds of local electricity rates. Over the past 3 years, Sunroof has grown from a part-time project to a full-time job for Elkin and his team.

Project Sunroof is a solar calculator from Google that helps you map your roof's solar savings potential. Learn more, get an estimate and connect with providers. Enter a state, county, city, or zip code to see a solar estimate for the area, based ...

Over the past 3 years, Sunroof has grown from a part-time project to a full-time job for Elkin and his team. Initially launched to drive consumer awareness and education, the service now also makes it easy for interested homeowners to connect with solar providers in their area.

Using the power of Google Maps and the Solar API, Project Sunroof provides homeowners with detailed information about their rooftop's solar potential, including the amount of sunlight it receives and the estimated ...

Google project sunroof St Vincent and Grenadines

Identification of roof outlines begins with the rough building outlines available in Google Maps . These were further refined using heuristics (e.g., green objects, or surfaces at ground height, are unlikely to be roofs).

Using the power of Google Maps and the Solar API, Project Sunroof provides homeowners with detailed information about their rooftop's solar potential, including the amount of sunlight it receives and the estimated energy production that ...

Project Sunroof uses digital surface models, 3D imaging, and a series of datasets like average weather patterns to determine the amount of direct sunlight a roof receives in a day as well as how much shade there is.

Explore estimated solar potential of your community. Updated total solar potential data for cities and regions around the world available in the Environmental Insights Explorer (EIE) . Simply enter a state, county, city, or zip code to see a solar estimate for the area, based on the amount of usable sunlight and roof space.

Identification of roof outlines begins with the rough building outlines available in Google Maps . These were further refined using heuristics (e.g., green objects, or surfaces at ground height, ...

Project Sunroof utilizes Google Earth and Google Maps 3D imagery to create a digital model that looks at the direction a roof is facing, the angle of the roof, and shade factors to determine how effective a rooftop solar system would be.
