

HKUST Energy Storage Cabinet

What is HKUST Energy Institute?

The HKUST Energy Institute is a multidisciplinary platform that integrates cutting-edge research, technology developments, and education on the generation, storage and distribution of sustainable energy. The research targets both near-term energy challenges and long-term energy needs that will exert transformative impacts globally.

What does HKUST stand for?

[Download Photo]The Hong Kong University of Science and Technology(HKUST) is at the global forefront for the development of an e-fuel energy storage technology that will revolutionize the way energy is currently stored, and open up brand new possibilities for worldwide application.

Who delivered the keynote lecture at HKUST energy day?

The Keynote Lecture at the HKUST Energy Day was delivered by Mr Chin-wan TSE, BBS, JP, Under Secretary for the Environment, HKSAR Government. He said, "The Paris Agreement has highlighted the promotion of renewable energy (RE) as one initiative to combat climate change.

What are the different types of energy storage solutions?

Solar cells, wind turbines and biofuels. Cost-effective storage for electricity grids and high energy-density storage for mobile applications. Hydrogen generation, fuel cells and batteries. Streamlining energy usage with smart green buildings and more efficient thermal systems, electronics and LED lighting.

Professor Zhao combines his expertise in research and technological innovation with a commitment to creating clean energy production and storage devices for a sustainable future. He has made seminal contributions in the areas of fuel ...

To develop nanostructured composite materials with potential energy storage applications (particularly lithium battery and supercapacitor) and understand the underlying principles. ...

The HKUST Energy Institute is a multidisciplinary platform that integrates cutting-edge research, technology developments, and education on the generation, storage and distribution of sustainable energy. The research targets both near ...

Electrochemical Energy Storage Technologies. 3:00 - 5:30 pm. Welcome. Prof. Hong Kam Lo. Dean of Engineering, HKUST Room Temperature Solid-State Batteries by Tailored Materials, Structures, and Interfaces - from Li to Na. Prof. ...

Unlike other energy storage options, e-fuel systems will be efficient, site-independent, safe and durable. This project will solve the intermittency issue and enable a new energy mix that is both sustainable and ...

The ever-increasing demands for higher energy/power densities of these electrochemical storage devices have led to the search for novel electrode materials. Different nanocarbon materials, in ...

Working towards the goal of creating "zero emission" cities and reducing carbon footprint, we strive to further develop smart energy and energy harvesting technologies, discover clean energy sources, modify techniques to construct ...

The HKUST Energy Institute is a multidisciplinary platform that integrates cutting-edge research, technology developments, and education on the generation, storage and distribution of ...

The e-fuels can store energy from renewable yet intermittent sources like solar and wind energy, and release the energy wherever and whenever needed. Unlike other energy storage options, e-fuel systems will be ...

With HKUST's strong background in energy research, especially in the area of solar cells, fuel cells, solid state lighting and thermal energy technologies, the Institute is ready to power ahead cutting-edge technologies ...
