What is APC battery backup?

APC battery backup with an LCD (Liquid Crystal Display) shows quick and easy information on the utility and UPS status. Hot-swappable batteries offer clean uninterrupted power to protect equipment while batteries are being replaced. PowerChute Software allows you to access additional power protection and management features.

What makes a good UPS battery backup?

Even if you're not prone to power outages, many UPS models also include surge protection features. An automatic voltage regulator smoothes over brownouts and spikes without needing to change your battery. It's one of several capabilities you'll want to look for in the best battery backups.

Do you need a battery backup?

One important part of your plan should be considering battery backups--also known as an uninterruptible power supply, or UPS--which will automatically take over when the power drops or goes out entirely. But no one solution's perfect for everyone.

How many watts can a battery backup output?

In general, the best battery backups can output at least 400W. UPS models include several different features, but you'll want to focus on a couple, depending on what you want to back up. A sine-wave inverter allows a UPS to produce a clean sine waveform, which is the best type for power output.

How much power do you need for a battery backup?

However, you'll need to make sure that your supply has enough output power for the job. In general, the best battery backups can output at least 400W. UPS models include several different features, but you'll want to focus on a couple, depending on what you want to back up.

Why do you need a battery backup?

So, it's easy to have a battery backup for the most important components in your network. It also will regulate your system when it's not functioning in battery backup since it has line interactive topology, with automatic voltage regulator. Another nice touch is that they've angled the LCD, so viewing the UPS status is easier.
