Should I choose a roof or a ground-mounted solar system?

If your roof works for solar and can fit enough solar panels to meet your energy needs, it's usually best to choose rooftop solar panels. If you need a really large system that won't fit on your roof and you have enough open land, opt for ground-mounted panels.

Can a solar array be installed on a hill?

No matter where you're at there's going to be some sort of undulation," said Rob Stoll, photovoltaic tracker design manager at RBI Solar. A ground-mounted solar array ascends up a hill. While it's simpler to install solar on flatter terrain, hills and undulating ground are feasible solar sites. RBI Solar

Do ground-mounted solar panels work?

As the name suggests, ground-mounted solar panels are mounted to the ground, rather than a roof. In most cases, it's easiest and most cost-effective to get a rooftop solar system. But if rooftop solar won't work for your home, ground-mounted systems offer some clear benefits.

What are the different types of ground-mounted solar panels?

There are two basic types of ground-mounted solar panel systems: Standard ground mounts use metal framing driven into the ground to hold your solar panels up at a fixed angle. Operators can manually adjust some standard ground-mounted solar panel systems a few times a year to account for seasonal shifts of the sun.

What are the advantages and disadvantages of solar PV power generation?

There are advantages and disadvantages to solar PV power generation. PV systems are most commonly in the grid-connected configuration because it is easier to design and typically less expensive compared to off-grid PV systems, which rely on batteries.

Are ground-mounted solar systems more expensive than roof-mounted systems?

They're usually more expensive than roof-mounted systems but can maximize your renewable energy production depending on your roof's orientation and shading. Standard ground and pole mounts are the two most common types of ground-mounted solar system installations.
