What is solar photovoltaic (PV) power generation?

Solar photovoltaic (PV) power generation is the process of converting energy from the sun into electricity using solar panels. Solar panels, also called PV panels, are combined into arrays in a PV system. PV systems can also be installed in grid-connected or off-grid (stand-alone) configurations.

What is a solar panel used in a home?

used in a home. Here are some quick definitions to help you. Solar photovoltaic (PV) systems are made up of several panels. Each panel has many cells made from layers of semi-conducting material, usually silicon. When light shines on the material, it creates a flow of electricity. Solar panels don't need direct sunlight and can work on cloudy days.

What is a solar PV system?

power being generated by solar panels or be used in a home. Here are some quick definitions to help you. Solar photovoltaic (PV) systems are made up of several panels. Each panel has many cells made from layers of semi-conducting material, usually silicon.

What is solar power & how does it work?

The sun provides an abundant source of clean, renewable energy. This can be converted into electricity using solar photovoltaic panels, known as 'solar PV', installed on your roof. This electricity can power your home, save you money, and help to decarbonise grid-supplied electricity.

How do solar panels convert sunlight into electricity?

This can be converted into electricity using solar photovoltaic panels, known as 'solar PV', installed on your roof. This electricity can power your home, save you money, and help to decarbonise grid-supplied electricity. Solar PV systems - a collection of solar panels - turn sunlight into electricity through the 'solar cells' they contain.

What are grid-connected and off-grid PV systems?

Learn about grid-connected and off-grid PV system configurations and the basic components involved in each kind.
