

Does Dominica have a national energy plan?

Dominica drafted a national energy plan in 2011 and revised it in 2014. The objective of the plan is to make electricity generation on the island self-sufficient by 2020 using sustainable and indigenous resources.

Does Dominica generate solar power?

Dominica has a high solar potential with a solar resource of 5.6 kWh per square meter per day. The government has installed LED streetlights (in 2013 and 2014). Dominica also has approximately 30 MW of wind power potential, some of which is under development.

Can Dominica develop geothermal power?

Dominica is expected to develop more than 100 MW of geothermal power and has secured funding for early-stage investment through the World Bank's Geothermal Development Plan. The island may be able to secure additional international and private sector funding for these projects.

Does Dominica have hydropower?

In the past, hydropower supplied 90% of Dominica's electricity. However, as population and electricity demand grew, diesel generator use increased and hydropower share diminished. Dominica Electricity Services Limited (DOMLEC) is the sole electric utility with an installed electrical generating capacity of 23.8 megawatts (MW) and a peak demand of 17.2 MW.

Does Dominica heavily rely on fossil fuels?

Despite having three hydroelectric plants on the Roseau River that produce 27.4% of Dominica's electricity supply in the present day, Dominica is not heavily reliant on imported fossil fuels as other islands in the region. In the 1960s, hydropower supplied 90% of Dominica's electricity.

How much wind power is available in Dominica?

Dominica has a wind power potential of 10 MW at Crompton Point in Saint Andrew and an additional 20 MW elsewhere in the country. After reviewing nine wind studies, DOMLEC came to this conclusion.

The Government is committed to make Dominica the first climate-resilient nation by 2030 and is working to create favourable conditions for future sustainable investments in renewable energies. As the island most advanced in geothermal explorations, Dominica is already a leader in renewable energy in the Caribbean.

Dominica explores the stable and continuous flow of power from geothermal energy. Unlike wind or solar, this resource offers a consistent supply, unaffected by the time of day, and maintains the untouched beauty of the Roseau Valley by harnessing energy from beneath the surface.

Dominica, a small island nation in the Caribbean, has been making significant strides in recent years to

transform its energy market and infrastructure. With a population of just over 70,000, the country has been heavily reliant on imported fossil fuels for electricity generation.

Dominica's Renewable Energy initiatives are central to the nation's vision of achieving energy independence and sustainability. Known as the "Nature Island of the Caribbean", Dominica leverages its abundant natural resources -- geothermal, hydroelectric, solar, and wind energy--to reduce reliance on imported fossil fuels, lower ...

The Caribbean island has even gained the support of former US President Bill Clinton who commended Dominica's efforts and testified that the nation could "lead the way in producing clean energy". A new programme from the European Union has also been announced which will support Dominica's renewable energy sector through a multitude of ways.

The Caribbean island has even gained the support of former US President Bill Clinton who commended Dominica's efforts and testified that the nation could "lead the way in producing clean energy". A new programme from ...

Built on UL Solutions' trusted HOMER hybrid power optimization platform, HOMER's Front software provides a powerful online web application that helps you more accurately and quickly model and optimize the technical and economic performance of utility-scale battery energy storage systems (BESS), solar and wind - independently or as hybrid systems.

Dominica drafted a National Energy Plan in 2011 and revised it in 2014 to state its objective of using sustainable and indigenous resources to make electricity generation on the island self-sufficient by 2020. It does not set binding targets, but describes a ...

A small but growing number of countries are well on their way to producing all of their electricity from renewable sources. Dominica, in the eastern Caribbean, is planning to join these pioneers...
